SABARISWARAN V

Full-Stack Software Engineer | Angular · ASP.NET Core · C# · PostgreSQL

6382513885 | sabariswaran.swe@gmail.com | LinkedIn: linkedin.com/in/07-sabari

SUMMARY

Results-driven Full-Stack Software Engineer with 3.7 years of experience architecting, building, and optimizing high-throughput production web applications using Angular, ASP.NET Core, C#, and PostgreSQL. Proven track record of scaling real-time systems, including a live video streaming platform supporting 6,000 concurrent election cameras. Strong expertise in distributed system reliability, asynchronous API design, and complex relational schema optimizations.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, SQL

Backend: ASP.NET Core, Web API, RESTful Microservices, SignalR, Entity Framework Core, MVC

Frontend: Angular, RxJS (State & Stream Management), HTML5, CSS3, Bootstrap, Swagger/OpenAPI

Databases: PostgreSQL (Indexing, Transactions, Joins)

Core Concepts: System Design (HLD/LLD), Concurrency & Multithreading, Clean Architecture, OOP, OAuth2/JWT Authentication, Data Structures & Algorithms

Tools & DevOps: Git, Docker, Jira, Postman, CI/CD Baselines

PROFESSIONAL EXPERIENCE

Associate Software Developer — Xenovex Technologies *May 2025 – Aug 2026*

- **End-to-End Architecture:** Architected and independently deployed 'Livestreaming', a real-time surveillance streaming platform handling 6,000 simultaneous polling-station and police toll-gate feeds during the 2026 election, keeping streams stable under high concurrent traffic loads.
- **Real-Time Data Streaming:** Engineered real-time monitoring dashboards using ASP.NET Core SignalR WebSockets, implementing dynamic, client-configurable multi-screen view matrix grids (up to 4x4) to handle highly dense data updates seamlessly.
- **Secure API Engineering:** Designed and optimized highly secure REST APIs utilizing JWT-based role-based access control (RBAC) and claim-based authorization layers consumed by high-volume front-end applications.
- **High-Impact Features:** Developed complex, rule-driven subsidy booking engines for a high-priority government agriculture project; provided critical hot-fix production support on legacy systems (AED, Ticket One, Electone) to patch memory bottlenecks.

Software Developer — KY Technologies *Aug 2022 – Nov 2024*

- **Workflow Engine Design:** Developed the core operational engines of 'National', a large-scale workflow management platform, mapping asynchronous multi-tier departmental states across 20–30 highly dependent sequential stages.
- **Relational Database Optimization:** Designed scalable relational schemas, database constraints, complex joins, and transactional isolation logic in PostgreSQL to maintain zero data loss during high-frequency workflow state transitions.
- **Enterprise Full-Stack Components:** Implemented modular UI architectures in Angular alongside robust ASP.NET Core REST API microservices to handle user management, complete audit trails, and automated MIS reporting modules.
- **Production Reliability:** Diagnosed and resolved complex production exceptions across core HRMS and customer demo platforms by tracing root causes in application middleware logs.

KEY PROJECTS

Livestreaming — Real-Time Camera Infrastructure (Angular, ASP.NET Core, SignalR, WebSockets)

- Scaled a mission-critical streaming app for 6,000 live election devices. Implemented an asynchronous SignalR pub/sub event pipeline to stream status telemetry down to highly performant Angular grid views with low latency.

National — Distributed State Approval Engine (Angular, ASP.NET Core, PostgreSQL, EF Core)

- Engineered a production enterprise engine routing factory workflows through a complex loop of 20–30 approval gates. Designed database transactional savepoints to guarantee data consistency when state rollbacks occurred.

EDUCATION

B.E., Mechanical Engineering — ARS College of Engineering, Chennai | CGPA: 7.5

HSC — 75%
